Innovation is created when inventors obtain patents on their new discoveries...patents bring access to capital, new manufacturing facilities, and new jobs.

We need to reform the patent system to promote innovation and ensure the inventor’s path through the U.S. Patent & Trademark Office is smooth and timely.

And we need to do it now.

The Patent Reform Act of 2010 establishes a simpler, objectively based, transparent patent system that will:

- Encourage innovation and spur new investments
- Create new high-wage, important jobs for American workers
- And help ensure the nation’s position in the global marketplace.
